November 2009
What is a Care Pathway?
A care pathway is a complex intervention for the mutual decision making & organisation of care processes for a well defined group of patients during a well defined period.

Defining characteristics of care pathways include: 5 Key Elements
1. An explicit statement of goals / key elements of care based on evidence, best practice
2. The facilitation of the communication among team members & with patient’s & families
3. The coordination of the care process by coordinating the roles & sequencing the activities of the MDT, patients & carers
4. The documentation, monitoring & evaluation of variances & outcomes
5. The identification of the appropriate resources

Dr kris Vanhaecht, secretary General of the European Pathway Association

The Liverpool Care Pathway for the Dying Patient (LCP)

Over the past few years a major drive has been underway to ensure that all dying patients, and their relatives and carers receive a high standard of care in the last hours or days of their life. The Liverpool Care pathway for the Dying Patient (LCP) within the LCP Continuous Quality Improvement Programme is one of the key programmes within the Marie Curie Palliative Care Institute Liverpool (MCPCL) portfolio.

The LCP was recognised as a model of best practice in the NHS Beacon Programme (2001). It was then subsequently incorporated into the Cancer Services Collaborative project and the National End of Life Care Programme (2004-7). It was recommended in the NICE guidance on supportive and palliative care for patients with cancer (2004) as a mechanism for identifying and addressing the needs of dying patients. It was recommended in the Our Health, Our Care, Our Say white paper 2006 as a tool that should be rolled out across the country. It is recommended in the End of Life Care Strategy DH 2008.

The LCP Continuous Quality Improvement Programme incorporates:

1 Aim
To improve care of the dying in the last hours / days of life

2 Key Themes
To improve the knowledge related to the process of dying
To improve the quality of care in the last hours / days of life

3 Key Sections
Initial Assessment
Ongoing Assessment
Care after death

4 Key Domains of Care
Physical
Psychological
Social
Spiritual

5 Key Requirements for Organisational Governance
Clinical Decision Making
Management & Leadership
Learning & Teaching
Research & Development
Governance & Risk
As with all clinical guidelines and pathways the LCP aims to support but does not replace clinical judgement

- The LCP generic document guides and enables healthcare professionals to focus on care in the last hours or days of life. This provides high quality care tailored to the patient’s individual needs, when their death is expected.

- Using the LCP in any environment requires regular assessment and involves continuous reflection, challenge, critical senior decision-making and clinical skill, in the best interest of the patient. A robust continuous learning and teaching programme must underpin the use of the LCP.

- The recognition and diagnosis of dying is always complex; irrespective of previous diagnosis or history. Uncertainty is an integral part of dying. There are occasions when a patient who is thought to be dying lives longer than expected and vice versa. Seek a second opinion or specialist palliative care support as needed.

- Changes in care at this complex, uncertain time are made in the best interest of the patient and relative/carer and needs to be reviewed regularly by the Multi-disciplinary Team (MDT)

- Good comprehensive clear communication is pivotal and all decisions leading to a change in care delivery should be communicated to the patient where appropriate and to the relative/carer.

- The views of all concerned must be listened to and documented.

- If a goal on the LCP is not achieved this should be coded as a variance. This is not a negative process but demonstrates the individual nature of the patient’s journey based on their particular needs, your clinical judgement and the needs of the relative/carer.

- The LCP does not preclude the use of clinically assisted nutrition or hydration or antibiotics. All clinical decisions must be made in the patient’s best interest.

- A blanket policy of clinically assisted (artificial) nutrition or hydration, or of no clinically assisted (artificial) hydration, is ethically indefensible and in the case of patients lacking capacity prohibited under the Mental Capacity Act (2005)

The patient will be assessed regularly and a formal full MDT review must be undertaken every 3 days.

We continue to believe the LCP is a means to empower healthcare professionals by winning time in the climate of “busyness” to enable best practice in the last hours or days of life. The LCP is a vehicle through which best quality of care for the dying is made measurable, explicit and visible. It is valued because of the positive impact on the patient, carer and staff and it can therefore bring about a change in the culture of an organisation.

Professor Mike Richards, Chair, End of Life Care Strategy Advisory Board commented in the foreword of the final Report of the National Audit Round 1 2008 that:
“How we care for the dying must surely be an indicator of how we care for all our sick and vulnerable patients. Care of the dying is urgent care; with only one opportunity to get it right to create a potential lasting memory for relatives and carers.”

End of Life Care Strategy July 2008

“Good PCT’s will want to ensure that the particular needs and wishes of all people who are dying should be identified and addressed. The LCP provides a well-established mechanism for achieving this. PCT’s are therefore strongly recommended to ensure that the LCP is adopted and its use audited in all locations where people are likely to die”

Thomas Hughes-Hallett, Chief Executive of Marie Curie Cancer Care, and Chair, End of Life Care Implementation Advisory Board commented in the foreword of the final Report of the National Audit Round 2 2009 that:
“Time is of the essence; care of the dying is everyone’s business”
The LCP generic document is only as good as the teams using it. Using the LCP generic document in any environment therefore requires regular assessment and involves regular reflection, challenge, critical senior decision-making and clinical skill, in the best interest of the patient. A robust continuous learning and teaching programme must underpin the implementation and dissemination of the LCP generic document. This LCP generic version 11 has been reviewed since December 2007 as part of an extensive consultation exercise and the LCP generic version 12 is now available to reflect the feedback from the consultation and latest evidence.

The ethos of the LCP generic document has remained unchanged. In response to the consultation exercise including 2 rounds of the National Care of the Dying Audit – Hospitals (NCDAH), version 12 has greater clarity in key areas particularly communication, nutrition and hydration. Care of the dying patient and their relative/carer can be supported effectively by either version of the LCP. The responsibility for the use of the LCP generic document as part of a continuous quality improvement programme sits within the governance of an organisation underpinned by a robust ongoing education and training programme.

We believe as with any evolving tool or technology that those organisations who are using the LCP generic version 11 will work towards adopting version 12.

National Care of the Dying Audit – Hospitals – NCDAH Round 2 - September 09

The second National Care of the Dying Audit of Hospitals (NCDAH) published on the 14.09.09, shows that patients supported by the Liverpool Care Pathway for the Dying Patient (LCP) are receiving high quality care in the last hours and days of life.

The audit covers the use of the LCP in 155 hospitals, looking at the records of almost 4000 patients. The audit was led by the Marie Curie Palliative Care Institute Liverpool (MCPCIL) in collaboration with the Clinical Standards Department of the Royal College of Physicians (RCP) supported by Marie Curie Cancer Care & the Department of Health End of Life Care Programme. The audit results are as impressive as those of the first audit, published in 2007. This shows that standards of patient care remain high, and underlines the value of the LCP in providing a framework in which clinical judgement can be exercised for the benefit of individual patients.

In the last 24 hours of life the vast majority of patients are reported to be comfortable. This is demonstrated by the four hourly assessments recorded on the LCP.

This audit of patients whose care was supported by the LCP showed that, even in their last 24 hours, 65% of patients needed no continuous subcutaneous infusion of medication to control distress from agitation or restlessness. 31% had low doses of medication to relieve symptoms delivered by a subcutaneous infusion, the remaining 4% required higher doses. These findings indicate, that dying patients receive good clinical care, tailored to the individual and their distress, when supported by the LCP.

New in this Round of the Audit are 3 Key Performance Indicators (KPI’s) that managers in healthcare use to monitor and improve care:

- Spread of the LCP
- Anticipatory prescribing for the key symptoms in the last hours / days of life
- Compliance with completion of the LCP

A key recommendation in the Audit is that hospitals collate a remedial action plan in response to the audit key findings and the individual hospitals results.
THE LCP AND SUB - SPECIALITY AREAS

There is a 4 phased approach to demonstrate transferability into a sub speciality area as outlined below;

Key Requirements for all projects:
• A specialist palliative care team who have implemented the LCP within the generic environment
• A specialist palliative care team with the resource to implement the LCP in the sub-speciality areas
• Sub-speciality areas with the capacity to engage in the LCP programme

PHASE 1 Local Induction Model - Local Pilot / Single site sub speciality area / patient cohort, a local project led by MCPCIL

PHASE 2 Local or National Dissemination Model to 4 – 6 sites (This may be a local dissemination or a national dissemination depending on the clinical arena and potential for national support)

PHASE 3 National Dissemination Model - Advertise a national consensus meeting

PHASE 4 National Evaluation Model - The National Meeting agreed consensus and proposes a National Benchmarking programme in line with National Audit Programme.

There are programmes within these phases for the following:
• Care in the last hours / days of life for those with advanced chronic kidney disease
• Care in the last hours / days of life for those with heart failure
• LCP - Intensive Care Units (ICU)
• LCP Children

WINNING HEARTS AND MINDS

A major cultural shift is required if the needs of dying people are to be met and the workforce are to be empowered to take a leading role in this process. Dying patients are an integral part of the population. Their death must not be considered a failure; the only failure is, if a person’s death is not as restful and dignified as possible.

Since improvement depends on the actions of people, ultimately it comes down to winning hearts and minds. No matter how good you believe the LCP Continuous Quality Improvement Programme is; you cannot just expect others to do as they are told, nor can you be everywhere at once to ensure compliance. Command and control will not be successful in this process.

The LCP is only as good as the people using it. It represents a step in the right direction towards best practice for all whose death is expected. The LCP document itself will only make a real difference if it is used alongside an implementation and dissemination model firmly embedded in the organisation and supported by a continuous learning programme.

The LCP acts as a catalyst for organisational change, it can generate discussions on a local, national and international level that can only serve to improve care of the dying from bedside to policy.
If you would like further information about the LCP please contact:
